> experience

> 🏀 [PBA Court Kings](#) (PBA licensed) | UE 5 programmer | jan 2026 – present

[tools programming • character customization • data persistence • editor workflow]

> developed [gameplay systems and development tools](#) for [PBA Court Kings](#), the officially licensed video game of the [Philippine Basketball Association](#), built in Unreal Engine 5.

> implemented a [runtime morph customization widget](#) for modifying character model proportions per player across team rosters

> developed an [editor utility workflow](#) that reads saved morph values and applies them to the corresponding player's data table row

> connected runtime testing with [persistent](#) roster data, allowing character tuning changes to be [previewed in-game and saved back into production data](#)

> Pawfee Bean ☕ [\(Steam Page\)](#) | lead programmer | *Unity*

[systems design • game programming • multiplayer • tools programming]

> [lead programmer](#) on a multiplayer Steam title developed by a small cross-functional team, responsible for gameplay systems, networking architecture, and technical implementation.

> implemented online multiplayer systems including lobby creation, matchmaking flow, RPC-based synchronization, and replicated player cosmetics using Photon PUN 2.

> designed [customer AI](#) with [NavMesh pathfinding](#) and [state machines](#)

(ordering, seating, eating)

- > developed **modular player systems** (input remapping, **interface-driven object interactions**, grid-based furniture placement) and supported production tasks (**UI/HUD implementation**)
- > architected **database-backed systems** for player-color cosmetics and randomized orders, fully synced between clients
- > collaborated with designers and artists to implement gameplay features and iterate on player-facing systems.

> **Super Cloud** 🦋 **(itch.io)** | contractor | *Unity*

[tools programming]

- > built a **modular post management tool** with **ScriptableObjects**, supporting updates via **CSV** (comma-separated values) and folder import
- > wrote **Unity Editor** extensions for **batch asset population** with custom inspectors
- > implemented a **mission unlock system** and prefab-driven post behavior with a **designer-friendly** workflow

> 🌐 **HereForYou** project | web dev intern | february 2025 - august 2025

[web development • web design • web APIs • agile workflow]

- > implemented responsive components using **typescript** and **html/css**
- > collaborated with a small team using an **Agile workflow**

> education

> **b.s. computer science: computer game design**

[university of california, santa cruz • june 2025]

> relevant coursework:

game systems • game dev patterns • **game production studio** •
data structures & algorithms • **game technologies (Unity)**

> skills

> languages: [c#](#) • [c++](#) • javascript • html/css • typescript • python

> engines: [Unity](#) • phaser • godot • unreal engine 5

> systems: [gameplay programming](#) • [ECS \(Unity DOTS\)](#) • tools dev •

[AI behavior](#) • networking • UI/UX systems

> tools: [git](#) • [photon PUN 2](#) • [visual studio code](#) • figma • node.js
